

Clone2GHL — Funnel Intelligence Platform

Chrome Web Store Submission Guide

Version 1.0.5 • Update to the published extension • Prepared June 20, 2026

This package is ready to upload. Version 1.0.5 is an update to your already-published Clone2GHL extension. The production backend is already live, so the new version works the moment Google approves it. The whole submission takes about **3 minutes** — just follow the three steps below.

1. What you're uploading

File to upload	<code>clone2ghl-chrome.zip</code> (attached to the email)
Version	1.0.5 (1.0.4 will be rejected as "same version")
Submission type	Update to the existing published item
Extension ID	<code>mjphmimkcjjhaejnlpcpekeekjmjfajk</code>
Backend	<code>https://api.clone2ghl.com</code> (already live)
Permissions	No new permissions vs 1.0.4 (one unused one was removed). Nothing to change on the privacy screen.

2. How to submit (about 3 minutes)

- 1 Go to the **Chrome Web Store Developer Dashboard** (chrome.google.com/webstore/devconsole) and open **Clone2GHL – Funnel Intelligence Platform**.
- 2 In the left menu choose **Package** → **Upload new package**, and select the attached `clone2ghl-chrome.zip`. It must read as version **1.0.5**.
- 3 Open the **Store listing** tab, paste the "**What's new**" text (Section 3) into the update notes, then click **Submit for review**.

Nothing else needs changing. Screenshots, description, privacy and data-use answers all stay exactly as they were approved for 1.0.4. Google usually reviews updates within **1–3 business**

days.

3. "What's new" text — copy & paste

v1.0.5 – Much easier onboarding & activation

- New one-step Welcome screen: activate your plan with just your email + code (and set a password to sign in anytime).
- Guided "Getting Started" checklist that walks you from sign-in → connect GoHighLevel → first clone.
- Built-in Help & Guide with quick-start, FAQs, and troubleshooting.
- Clearer plan & status at a glance, per-plan upgrade buttons, and a friendlier push-to-GoHighLevel experience.

4. What this update delivers for users

- **Frictionless activation** — pay on clone2ghl.com, get an emailed code, open the extension to a Welcome screen, enter email + code + password, and the plan is active. Future logins are just email + password.
- **Guided onboarding** — a Getting Started checklist takes new users from sign-in to their first clone.
- **In-extension Help & Guide** — quick-start, FAQs and troubleshooting, so users can self-serve.
- **Clearer plans & status** — at-a-glance plan label, per-plan upgrade buttons, and a smoother push-to-GoHighLevel experience.

5. What we fixed & verified in this build

This package passed a full pre-submission review — packaging, security, Chrome policy, and the activation flow were all checked. **No blocking issues remain.**

Fixes applied

- **Fixed a packaging issue** that could have caused Chrome to reject the upload: the previous zip stored file paths in a non-standard format. The package is now fully compliant.
- **Removed an unused permission** (a GoHighLevel host that the code never calls) — cleaner and more reviewer-friendly, with no effect on features.
- **Slimmed the package** by removing two developer-only / unused files.
- **Polished the billing screen** so it shows a clean empty state instead of an error when there are no invoices yet.

Verified before packaging

- ✓ Version is 1.0.5 and points at the live production backend (no test/localhost addresses).
- ✓ All required files present — both languages (English, Spanish) and all icons load correctly.
- ✓ No hardcoded passwords, API keys or secrets anywhere in the package.
- ✓ No remotely-loaded code — meets Chrome's strict code policy.
- ✓ The new Welcome / activation / sign-in flow works end-to-end against the live backend.
- ✓ All automated logic tests pass (18/18).

6. After Google approves

- Run **one real test purchase per plan** (Starter, Pro, Agency) to confirm the full pay → email code → activate flow end-to-end.
- If the two go-live setup tasks aren't finished yet (verify the email sending domain in Resend, and connect the GoHighLevel purchase/refund workflows), complete those so activation emails send automatically. Your developer has the step-by-step for these.

- Then you're ready to announce. 🎉

7. Quick reference

Item	Value
File to upload	<code>clone2ghl-chrome.zip</code> (attached)
Version	1.0.5
Developer Dashboard	chrome.google.com/webstore/devconsole
Backend health check	https://api.clone2ghl.com/health (should show <code>"ok": true</code>)
Typical review time	1–3 business days

Clone2GHL — Funnel Intelligence Platform • v1.0.5 Chrome Web Store submission reference. Prepared for the Clone2GHL store owner. If anything looks different during upload, contact your developer before submitting.
